ISO TOP 500 Continues to Shed Light on our Economy

Istanbul Chamber of Industry proudly announces the 2015 results of the “Turkey’s Top 500 Industrial Enterprises” (ISO Top 500), the most comprehensive and long-term survey on the Turkish industrial sector. This valuable study, our chamber’s contribution to the Turkish industry for the past 48 years, continues to demonstrate our sector’s development and shed light on our economy’s future.

In 2015, Turkish economy saw 4 percent growth once again driven by the industrial sector, contributing 1 percent to the growth rate. Although the industry constituted a smaller share of the economy in 2015, the value added generated by the ISO Top 500 enterprises increased to 7.8 percent.

One of the most important factors demonstrated by this year’s ISO Top 500 results is high financing costs borne by industrialists in the past year, as was the case in previous years. In 2015, ISO Top 500 enterprises reported TL 28 billion in financing costs, with a 75.1 percent rise year-on-year. The industrial sector spent 63.4 percent of its operating profit to financing—the highest ratio over the recent years. It is becoming more and more impossible for the Turkish industry to survive with such a unique and unprecedented structural problem troubling its financing structure.

Another financial ratio provided by the ISO Top 500 Industrial Enterprises survey shows that, in 2015, equity ratio decreased to 37 percent for private enterprises. From another perspective, debt ratio mounted to 63 percent. Deterioration carries on for the private sector’s equity structure.

The disruption in the total debt to equity balance is much more drastic. Accordingly, equity drop, which had stabilized in 2014, resumed its rise in 2015. The most remarkable development is seen in the private sector, with companies hitting 170.6 percent equity ratio in 2015.

As I present to you the “Turkey’s Top 500 Industrial Enterprises – 2015 survey”, I would like to congratulate fellow industrialists for leading our country’s growth in the face of all challenges, hoping that the time will bring along more convenient opportunities to help develop our industry. I would like to extend my gratitude to our Department of Economic Research for their dedicated and diligent efforts in preparing the study, and to our esteemed academics and consultants who expanded the breadth and depth of our survey with their views.

Turkey's Top 500 Industrial Enterprises 2015

Department of Economic Research of the Istanbul Chamber of Industry

The Istanbul Chamber of Industry has been compiling and publishing its survey of Turkey's largest industrial enterprises for the past 48 years. The survey started with 100 companies, developed in time to cover 300, and 500 industrial enterprises in 1980. Turkey's Top 500 Industrial Enterprises survey continues to be the most important source of reference, and it is followed with growing interest.

The 2015 results and assessments of "Turkey's Top 500 Industrial Enterprises" are prepared with the same painstaking effort for many years, and are published in the special June issue of the ISO Industry magazine in 2016.

The 2015 edition of "Turkey's Top 500 Industrial Enterprises" continues with the new content and methods used for the past two years. The results of the survey are published in early June. This year's survey also continued to use European Union's NACE Rev. 2 –Statistical Classification of Economic Activities for sectoral classification. The titles and assessments added over the past two years have enriched the study this year once again. The newly adopted indicators, mainly the earnings before interest, taxes, depreciation and amortization, abbreviated as EBITDA, were used

this year as well. As in the previous year, profile information of companies was collected electronically.

Covering only industrial companies, ISO Top 500 Industrial Enterprises ranks the companies by their production-based sales figures. Therefore, the sizes of the companies are determined by their industrial activities. These industrial activities include mining and quarrying, manufacturing, electricity, gas, steam and air conditioning supply sectors.

The main objective of the ISO Top 500 Industrial Enterprises survey is to determine the largest enterprises, with accumulated balance sheets and income statements of the ranked companies allowing for comparative analyses and evaluations.

Analyses and assessments have been performed in terms of basic economic indicators, financial ratios, profitability, value added and efficiency as well as technological activities.

ISO Top 500 Industrial Enterprises includes 49 newcomers in 2015, 38 of which were listed among ISO's Second Top 500 Industrial Enterprises last year. The remaining 11 directly entered the Top 500 in 2015 from outside the last year's ISO 1000.

Top Companies by Production-Based Sales

According to the ISO Top 500 Industrial Enterprises 2015 survey, the largest enterprise according to production-based sales is “TÜPRAŞ - Türk Petrol Rafinerileri A.Ş.”, which maintained its first place this year.

Last year’s large gap between TÜPRAŞ and the second company in terms of production-based sales was carried forward to this year. Production-based sales of TÜPRAŞ constitute 7.9 percent of the total sales of the top 500 companies in 2015.

Top Companies by Production-Based Sales		
	Overall Ranking	Production-Based Sales (Net) (Excluding Sales Taxes)
TÜPRAŞ	1	35.437.857.256 TL
Ford Otomotiv	2	14.732.855.608 TL
Arçelik	3	9.998.905.712 TL

In 2015, “Ford Otomotiv Sanayi A.Ş.” and “Arçelik A.Ş.” came second and third, respectively, for their production-based sales figures. Ford Otomotiv kept its second place year-on-year while Arçelik climbed up by one place to become third.

The 2015 top ten by production-based sales includes only one new entrant compared to the 2014 rankings. “Oyak-Renault Otomobil Fabrikaları A.Ş.” dropped down from third to fourth place, trading places with “Arçelik A.Ş.”. “TOFAŞ Türk Otomobil Fabrikası A.Ş.” moved up from ninth to fifth place.

Meanwhile, “EÜAŞ Elektrik Üretim A.Ş. Genel Müdürlüğü” dropped down from fifth to sixth place. “Ereğli Demir ve Çelik Fabrikaları T.A.Ş.” came seventh this year, up from the seventh place. “Hyundai Assan Otomotiv Sanayi ve Ticaret A.Ş.” jumped up to the eighth place from thirteen, becoming the sole new entrant in top ten. “İskenderun Demir Çelik A.Ş.” ranked ninth, moving down from its position as seventh last year. The standing of “İçdaş Çelik Enerji Tersane ve Ulaşım Sanayi A.Ş.” dropped from sixth to tenth. “Aygaz A.Ş.”, one of the top ten last year, came thirteenth in 2015.

As was the case for the past three years, the only public entity in the top 10 companies by production-based sales was “EÜAŞ Elektrik Üretim A.Ş. Genel Müdürlüğü” in 2015, falling to number six on the ranking.

The top three private companies by production-based sales were announced as “TÜPRAŞ-Türkiye Petrol Rafinerileri A.Ş.”, “Ford Otomotiv Sanayi A.Ş.” and “Arçelik A.Ş.”.

Top Companies by Value Added

The ISO Top 500 Industrial Enterprises survey also ranks companies by the value added they generate. The survey uses producers’ prices to calculate the gross value added generated by the companies.

In 2015, the top company that generated the highest value added at producers’ prices was “TÜPRAŞ-Türkiye Petrol Rafinerileri A.Ş.”, just as in 2013 and 2014. The runner-up preferred to remain anonymous. The third company to generate the highest value added was “JTI Tütün Ürünleri Sanayi A.Ş.”

The two publicly disclosed companies among top three that generated the highest value added in 2015 are private enterprises.

Top Companies by Value Added		
	Overall Ranking	Gross Value Added (at Producers’ Prices)
TÜPRAŞ	1	29.840.585.698 TL
-	2	-
JTI Tütün	3	8.640.426.656 TL

TÜPRAŞ, which generated the highest gross value added in 2015, is also Turkey’s largest company in terms of production-based sales. In 2014, TÜPRAŞ alone generated 15.3 percent of the total value added generated by the top 500 companies, and increased its weight to 19.6 percent in 2015.

Top Profit-Makers

The ISO Top 500 Industrial Enterprises survey also ranks companies by pre-tax profits. Compared to

previous year, the 2015 list witnessed major changes vis-a-vis top profit-makers.

The top profit-maker of 2015 was "TÜPRAŞ-Türkiye Petrol Rafinerileri A.Ş.", followed by "Eti Maden İşletmeleri Genel Müdürlüğü", "Ereğli Demir ve Çelik Fabrikaları T.A.Ş.", "İskenderun Demir ve Çelik A.Ş.", "Türkiye Petrolleri Anonim Ortaklığı", "Mercedes Benz Türk A.Ş.", in this order.

The top two profit-makers have changed in 2015. "Ereğli Demir ve Çelik Fabrikaları T.A.Ş." and "İskenderun Demir ve Çelik A.Ş.", the top two companies in last year's rankings, were replaced by TÜPRAŞ and Eti Maden.

Top Profit-Makers		
	Overall Ranking	Profit for the Period (Before Tax)
TÜPRAŞ	1	1.914.131.298 TL
Eti Maden	2	1.248.003.378 TL
Ereğli Demir ve Çelik	3	1.206.023.902 TL

Only seven of the top 10 profit-makers in 2014 maintained their places in 2015.

There are three public and seven private companies among the top 10 profit-makers. The second, fifth and seventh places are occupied by state-owned entities.

Top Exporters

Another important ranking in the ISO Top 500 Industrial Enterprises survey is the list of top exporters.

The top three exporters in 2015 are "Ford Otomotiv Sanayi A.Ş.", "TÜPRAŞ-Türkiye Petrol Rafinerileri A.Ş." ve "Oyak-Renault Otomobil Fabrikaları A.Ş.", which were the champions of 2013 and 2014, as well, yet with a slight change of places: In 2015, Ford Otomotiv replaced TÜPRAŞ to take the first place.

All of the top 10 exporters in 2015 were from the private sector. Nine out of ten biggest exporters were on the top ten list in 2014 as well. One new enterprise made it to the list in 2015, pushing another out of the top ten.

Top Exporters		
	Overall Ranking	Exports (thousand dollars)
Ford Otomotiv	1	3.847.112
TÜPRAŞ	2	2.911.830
Oyak-Renault	3	2.678.134

The exports of the top exporters totaled \$19 billion whereas the total exports of the top 500 companies amounted to \$53.4 billion. Top ten's share in exports corresponds to 35.6 percent among the top 500, and to 13.2 percent in Turkey's total exports.

Economic Aggregates

Industrial sector continues to lay the groundwork of economic growth and technological development for all countries. An industrialized country is a developed country. However, developed countries constantly strive to take their industrialization to the next level, while the industry itself grows into new stages. The new industrial revolution, also known as Industry 4.0, has been spreading out from developed countries as the latest and most advanced stage of industrialization. Developing countries, on the other hand, aim to complete their industrialization process to become fully developed while adapting to new phases of industrialization. Hence, there is a severe competition in industry on a global scale, both within and among developed and developing countries.

Turkey is likewise trying to industrialize in order to join the ranks of developed countries. The industrialization process adopted different policies at different stages since the foundation of the Republic and has felt the impact of domestic and foreign economic developments such as the opening up the economy to global markets in 1980, the establishment of the Customs Union with the European Union in 1996, and the free movement of goods in 2005. Industrialization has been under the shadow of both national and international economic developments following the global crisis of 2008. Furthermore, we have been recently witnessing technology-driven activities standing out and the Industry 4.0 becoming the main agenda item of industrialization.

Although Turkey has maintained the progress of its industrialization amidst global and national conditions, the shares of the industry and of the manufacturing industry in the national income have decreased significantly, showing a downward trend at current prices since 2001. The share of the industrial sector within national income was 26.6 percent in 1998, receding to 19.5 percent and 19 percent in 2014 and 2015 on a slight upswing. The share of the manufacturing industry in national income was 23.6 percent in 1998 and went down to 15.8 percent and 15.6 percent in 2014 and 2015, respectively.

The fact that the shares of the industry and of the manufacturing industry in the national income are decreasing before Turkey has become an industrialized country, although at slower rates in 2014 and 2015, remains to show signs of an unhealthy development for the industry, economy or Turkey.

There are many reasons for the decrease in the shares of the industry and of the manufacturing industry in the national income. One reason is that the growth rates in the industry and the manufacturing industry are lower than the average growth rates of other sectors or of national income.

This trend was carried on in 2015, as well. The year 2015 saw 4 percent growth in economy, 3.7 percent growth in industry, and 3.8 growth in manufacturing. The overall growth rate of the economy outpaced those of the industry and the manufacturing industry in 2015, as well.

The performance of ISO Top 500 Industrial Enterprises both affects and indicates the growth and development of the Turkish industry. In this respect, key indicators are the shares of the value added generated by the ISO Top 500 Industrial Enterprises both in the total industrial value added and in the GDP.

The share of the gross value added at basic prices generated by the ISO Top 500 Industrial Enterprises in industry rose from 21.5 percent to 22.1 percent in 2015 year-on-year.

While the share of the gross value added at basic prices generated by the ISO Top 500 Industrial Enterprises in GDP was 8.4 percent in 2012 and 2013, the rate declined to 7.5 percent in 2014 and climbed back to 7.8 percent in 2015.

The number of state-owned enterprises has been reducing among ISO Top 500 Industrial Enterprises. Thirteen in 2011, 2012 and 2013 lists, the number of state-owned enterprises shrank down to 11 in 2014 and further down to 9 in 2015. Meanwhile the number of private enterprises grew, reaching 489 and 491 in 2014 and 2015, respectively.

The basic indicators of the ISO Top 500 Industrial Enterprises and the changes in these basic indicators are shown in the tables.

The net production-based sales of the ISO 500 companies increased by 7 percent at current prices to TL 450.5 billion in 2015. Private companies increased their net production-based sales by 7.5 percent, while state-owned enterprises decreased by 3.9 percent. The net sales revenue of the top 500 enterprises grew by 7.5 percent to reach TL 508.1 billion.

The exports of the ISO Top 500 Industrial enterprises

decreased to \$53.4 billion, down by 12.9 percent in 2015. Hence, total exports of ISO Top 500 Industrial enterprises showed a downward trend for three consecutive years. Exports decreased by 13.1 percent and 1 percent for private companies and state-owned enterprises, respectively. This pattern is similar to those of 2013 and 2014. Turkey's overall export figures shrank down by 8.7 percent in 2015. The export decline was more intensely than the recession in overall Turkey.

The pre-tax total profit of the ISO 500 companies who made profits in 2015 increased by 5.2 percent at current prices and totaled TL 33.9 billion. The overall profit of the private companies reached TL 30.9 billion at a growth rate of 2.2 percent, while that of state-owned enterprises soared to TL 3 billion, up by 50.3 percent. The total profits of profit-making companies grew to a limited extent compared to 2014. Unlike previous year's figures, in 2015, private companies saw limited increase in profits, whereas state-owned enterprises raised their figures considerably.

The total losses of companies that incurred losses for the period grew by 9.1 percent. The total losses of the

private companies that recorded losses increased by 103.5 percent, whereas that of state-owned enterprises fell by 95.8 percent. In 2015, private companies recorded higher figures in losses while state-owned enterprises incurred significantly smaller losses year-on-year.

As a result, the total pre-tax profits and losses of the ISO 500 rose to TL 28.3 billion at current prices at a rate of 4.5 percent. Total profits and losses decreased by 7.7 percent at private companies, unlike state-owned enterprises which recorded high profits. The profit increase for ISO Top 500 Industrial Enterprises in 2015 was led by state-owned enterprises.

Total debt of ISO 500 enterprises went up by 19 percent in 2015, the breakdown of the increase is 19.7 percent and 8.5 percent for privately and publicly held enterprises, respectively. The share of short-term debt in overall debt increased by 13.9 percent and that of the long-term debt increased by 27 percent. The borrowing pace of top 500 regained speed in 2015.

The financial debt of ISO 500 companies grew faster than their total debt in 2015 at a rate of 25.1 percent. Financial

BASIC INDICATORS

debt of private companies and state-owned enterprises went up by 24.6 percent and 38.6 percent, respectively. It is observed that state-owned enterprises continued to incur a significant amount of predominantly financial debt in 2015.

In 2015, ISO Top 500 Industrial Enterprises registered TL 62 billion of EBITDA. EBITDA over net sales turnover went up from 10.7 percent to 12.2 percent.

The total equity of ISO Top 500 Industrial enterprises grew by 4.6 percent in 2015, reaching TL 202.8 billion. The equity of private and state-owned enterprises grew by 5.4 and 0.6 percent, respectively. State-owned enterprises' equity moderately increased in 2015, halting the decline over the last two years.

On another front, total assets of ISO 500 increased faster than equity, 12.8 percent to be specific. Private enterprises and state-owned enterprises recorded 13.9 and 3 percent growth in assets, respectively. In 2015, ISO Top 500 Industrial Enterprises supported their growth mainly with their resources rather than equity.

The fixed assets on the balance sheets of ISO 500 companies were up 13.8 percent in 2015, 14.3 percent for private enterprises and 10.1 percent for state-owned enterprises.

In 2015, the ISO 500 paid TL 9.7 billion interest, corresponding to a rise of 20.6 percent year-on-year.

The interest paid by private companies went up by 21.9 percent, and that of state-owned enterprises reduced by 10.7 percent.

The ISO Top 500 Industrial Enterprises generated TL 63.4 billions of net value added at factor prices, up by 12.5 percent year-on-year. The net value added went up by 7.7 percent and 134.2 percent for private companies and state-owned enterprises, respectively.

The gross value added at basic prices generated by ISO 500 went up by 11.8 percent in 2015. Private companies and state-owned enterprises registered 8.7 percent and 74.1 percent growth respectively in the gross value added at basic prices.

The gross value added at producers' prices of the ISO 500 enterprises increased by 16.5 percent. The gross value added at producers' prices went up by 15.2 percent and 54.4 percent in private companies and state-owned enterprises, respectively.

The faster rise of the value added at producers' prices than the value added at factor and basic prices is partly caused by higher indirect taxes for enterprises in 2015 compared to the previous year.

Another significant development in 2015 was state-owned enterprises' positive contribution to all the value added categories.

Weight of the Top 50 Industrial Enterprises

Turkey's Top 500 Industrial Enterprises survey classifies the enterprises in groups of fifty and calculates the shares of these groups in select economic aggregates in order to determine the weight of these enterprises among the ISO 500 and in the economy at large. These calculations help analyze and demonstrate the importance of economies of scale.

The steady decline of top 50 companies in total production-based sales has stabilized in 2015. In fact, their share in total production-based sales was 48.8 percent in 2015, down from 49.8 percent in 2013 and 48.7 percent in 2014. This stabilization indicates that production-based sales increase at a similar rate between top 50 and the remaining 450 companies. The share of the second group of fifty by production-based sales fell from 13.8 percent to 13.1 percent. The companies outside the top 50 continued to constitute a small portion of production-based sales.

The share of the top 50 enterprises in gross value added at producers' prices saw an uptrend in 2015, ending the decline over recent years. The share of the top 50 companies in total production-based sales increased to 55.5 percent in 2015, up from 53.3 percent in 2013 and 51 percent in 2014. Net production-based sales followed a steady course while the share in gross added value showed an upward swing.

Top 50 companies' share of pre-tax profit and loss for the period hiked in 2015. The share of pre-tax profit and loss for the period by top 50, which had dropped

by 12.1 points to hit 36.6 percent in 2014, jumped back by 7.4 percentage points to reach 44 percent in 2014. The share of the second top 50 in production-based sales fell from 20.3 percent to 11.5 percent. In 2015, the profitability ratios of the top 50 were better than those of the remaining 450.

The top 50 companies had 43.7 percent share in earnings before interest, tax, depreciation and amortization in 2015, up from 36.8 percent in 2014.

The top 50 companies increased their share in exports from 50.1 percent to 53 percent, up by 2.9 points in 2015 year-on-year. The increase in the exports of the top 50 companies is partly due to a slowdown of exports performance of the remaining companies.

In terms of wage employees, the share of the top 50 companies did not change significantly. The top 50 companies had a 30.7 percent share in wage employees in 2013, 30.1 percent in 2014, and finally 31.1 percent in 2015.

The top 50 companies correspond to not only almost half the weight of the ISO Top 500 Industrial Enterprises but have a substantial weight within the Turkish economy at large. The gross value added at producers' prices generated by the top 50 enterprises to Turkey's GDP reached 4.3 percent in 2015, up from 3.8 percent in 2014. In 2015, the top 50 companies maintained and even increased their sizable share in GDP.

The share of the top 50 in exports rose slightly in 2015 to 19.7 percent from 19.5 percent in 2014.

Distribution of the Top 500 Industrial Enterprises by Groups of 50 (%)

	Production-Based Sales (Net)	Gross Value Added (at Producers' Prices)	Profit and Loss for the Period (Before Tax)	EBITDA	Exports	Average of Wage Employees
1 - 50	48,8	55,5	44,0	43,7	53,0	31,1
51 - 100	13,1	15,5	11,5	13,4	10,6	12,6

Exports Performance

Economic policies implemented in Turkey aim to strengthen the contribution of net exports and exports to economic development. Exports therefore play a vital role in economic activities. Exports still serve an important purpose for the ISO Top 500 Industrial Enterprises as well. In 2015, industrial goods constituted 95.4 percent of Turkey's exports. Consequently, the exports of the ISO Top 500 Industrial Enterprises determine the export performance of Turkey. In fact, as of 2015, ISO Top 500 Industrial Enterprises constitute 37.2 percent of Turkey's overall exports and 38.9 percent of its industrial exports.

Turkey's export performance over the years has been driven by a number of factors. Lower commodity trade volume and decreased Euro-Dollar parity played a determining role in reduced prices of globally traded commodities in 2015, accompanied by geopolitical developments and problems faced in many of our markets.

It is within this context that Turkey's total exports fell to \$143.9 billion in 2015, shrinking by 8.7 percent. Exports, which had grown by 13 percent in 2012 with the help of gold exports and decreased by 0.4 percent in 2013, increased by 3.8 percent in 2014. Exports followed a fluctuating course over the last four years, 2015 included.

In 2014, exports grew by 3.8 percent in value and 5.5 percent in volume. As for 2015, exports shrunk by 8.7 percent in value and rose by 1.8 percent in volume.

Reduction of unit prices in 2015 had a negative impact on exports. 2015 saw 10.3 percent reduction in export unit prices.

Industrial enterprises, in an effort to compensate the loss caused by the global decline in commodity prices, resorted to selling goods in higher quantities.

The exports of the ISO 500 enterprises dropped 12.9 percent to reach \$53.4 billion in 2015. Meanwhile, Turkey's exports decreased by 8.7 percent.

The ISO Top 500 Industrial Enterprises survey examined the export performances of various sectors in 2015. According to the findings, the top 500 industrial enterprises showed similar export trends in different sectors. All but four sectors saw a reduction in export figures, while the apparel, wooden furniture, paper industry and printing industry saw an increase.

The reductions in exports were more dramatic for certain sectors. Basic metals industry saw a fall by 27.2 percent, textiles by 21.6 percent, refined petroleum products by 20.7 percent, plastic products by 24 percent, and pharmaceutical products by 24.7 percent.

From a broader perspective, exports in manufacturing industry dropped by 12.4 percent, mining and quarrying by 40 percent, and electricity, gas, steam and air conditioning supply by 46.3 percent.

In 2015, exports constituted 28.5 percent of total sales revenue of ISO Top 500 enterprises, up from 26.5 percent and 28.4 percent in 2013 and 2014, respectively.

Share of Exports in Total Sales Revenues (%)

Sectoral Distribution of Exports

BASIC FINANCIAL INDICATORS

Foreign Invested Enterprises

In 2015, the number of foreign invested enterprises among the ISO Top 500 Industrial Enterprises declined by one to reach 125. This number is on a gradual decline since 2009, and continued to fall in 2015, albeit at a slower pace.

The 125 foreign invested enterprises among the ISO Top 500 Industrial Enterprises accounted for 31.1 percent of total production-based sales in 2015, with a 1.5-point increase over 2014. Despite the decline in the number of enterprises, the share of foreign invested companies in total production-based sales continues to grow.

The share of foreign invested enterprises in gross value added at producers' prices, dropped from 40.3 percent to 39.9 percent in 2015 year-on-year. The decrease in the number of enterprises caused a limited loss of share in gross value added, as well.

The share of foreign invested enterprises in total profit and loss for the period fell to 32 percent in 2015. This ratio was 33.7 percent in 2014. The decrease in the number of foreign invested enterprises in 2015 pulled down their shares in total profit and loss for the period.

Foreign invested enterprises accounted for 29.6 percent of the earnings before interest, tax, depreciation and amortization among the 2015 Top 500 Industrial Enterprises. This ratio was 32.3 percent in 2014.

The foreign invested enterprises accounted for 42.1 percent of the exports of the ISO 500 in 2015. Despite the shrinking number of foreign invested enterprises, their share in total exports showed a 1.3-point increase compared to 2014. This means that the decline of shares in exports that occurred since 2010 was reversed in 2015. The foreign invested enterprises accounted for 15.9 percent of Turkey's exports in 2014 with a volume of \$25

billion and 15.6 percent in 2015 with \$22.5 billion.

The share of foreign invested enterprises among the ISO 500 in wage employees stood at 29.4 percent.

In parallel with the minor decline in the number of foreign-invested companies in 2015, their share in the fundamental indicators of top 500 did not change much.

When analyzed in groups of 50, the number of foreign invested enterprises was 16 in 2013, and 17 in 2014 and 2015.

Foreign invested companies are grouped and assessed in terms of their shares in groups of fifty. In terms of basic economic indicators, 124 foreign invested companies are distributed more evenly among groups of fifty. This even distribution is evidence of how foreign invested companies are more similar to each other in terms of scale in 2015 as well.

In 2015, 17 foreign invested enterprises in the top 50 accounted for 17.5 percent of the production-based sales, whereas, in 2014, 17 foreign invested enterprises in the top 50 made 15.9 percent of the production-based sales.

In 2015, the share of foreign invested enterprises in the top 50 by gross value added at producers' prices was registered as 21 percent in 2015. In 2014, 17 enterprises had 20.2 percent share.

As for total profit and loss, foreign invested enterprises took 16.1 percent share of the top 50 in 2015. In 2014, 17 enterprises had 15.2 percent share.

The share of the foreign invested enterprises in top 50 companies' exports was 26.3 percent in 2015, up from 23.5 percent in 2014. Their share in wage employees increased from 9.8 percent in 2014 to 10.5 percent in 2015.

Distribution of Foreign Invested Companies by Groups of 50 (%)

	Number of Enterprises	Production-Based Sales (Net)	Gross Value Added (at Producers' Prices)	Profit and Loss For the Period (Before Tax)	EBITDA	Exports	Average of Wage Employees

ISO Members among the Top 500 Industrial Enterprises

In 2015, there were 182 ISO member enterprises among the ISO 500, eight fewer than 2014. In 2014, however, there were a total of 190 ISO members among the ISO Top 500 Industrial Enterprises, 189 private and 1 state-owned. The number of ISO members among ISO Top 500 continued to fall in 2015, as it did in 2013 and 2014.

Although the number of ISO members in the ISO 500 list fell back from 190 to 182 in 2015, their share in fundamental indicators only changed slightly.

ISO members' share in net production-based sales was 44 percent in 2015, up from 43.9 percent in 2014. Meanwhile, their share in net sales fell from 45.6 percent to 45.4 percent.

ISO members' exports corresponded to 52.1 percent of those of ISO 500 enterprises in 2015, up from 50.9 percent in 2014. Exports by ISO members dropped from \$31.2 billion to \$27.9 billion. ISO members had a 19.4 percent share of Turkey's exports in 2015, down from 19.8 percent in 2014.

The survey evaluates the share of ISO members among the ISO 500 in terms of loss and profit, as well. The share of ISO members in the pre-tax profit for the period was 41.8 percent in 2014, falling to 37.6 percent in 2015. Their share of loss for the period rose from 16.7 percent in 2014 to 37.4 percent in 2015. ISO members' share of total profit and loss for the period (before tax) fell from 46.6 percent in 2014 to 37.7 percent in 2015.

ISO members accounted for 43.3 percent of the earnings before interest, tax, depreciation and

amortization of the ISO Top 500 Industrial Enterprises in 2015.

Shares of ISO members among the ISO 500 by total debt decreased by 0.2 points to become 41.8 percent in 2015; their share in total equity became 36.4 percent, down by 2.6 points, and in total assets was 39.7 percent, down by 1.0 points.

There were 263,409 wage employees in the 182 ISO members among the Top 500 Industrial Enterprises, accounting for 40.6 percent of all wage employees on the list. This ratio was 41.7 percent in 2014. The share of ISO members in wages and salaries paid was 43.2 percent in 2015, down from 45.2 percent in 2014.

ISO member enterprises accounted for 37.7 percent of the net value added generated by the Top 500 Industrial Enterprises in 2015. This ratio was 41.9 percent in 2014. The rate of wages and salaries paid in the total value added generated by the ISO members rose to 64.9 percent in 2015, with interest paid rising to 16.8 percent and profit (as national income) dropped to as low as 18.3 percent.

ISO member enterprises accounted for 38.7 percent of the gross value added at basic prices created in 2015, down from 42.1 percent in 2014.

As for gross value added at producers' prices, the ISO members' share was 41.1 percent in 2015, down from 44.5 percent in 2014.

The top 500 industrial enterprises included fewer ISO members this year, hence the smaller share of value added generated.

Factor Income Distribution of ISO Members

Financial Structure

Financial structure, an indicator which reflects the distribution of debt and equity, is the principal indicator demonstrating the financial structure of enterprises.

Private companies in Turkey use equity as a significant source of financing as often as they use borrowing facilities. In contrast with other countries, Turkish private companies continue their activities with higher financial leverages, in other words with higher borrowing ratios. The expanding variety and decreasing costs of global borrowing have been particularly effective for Turkish private companies to reinforce this trend. The borrowing trend continued in 2015, despite the tighter fiscal conditions.

There are limits to finding funds for equity within the company depending on profitability. Limited profits in 2015 had a negative impact on equity sizes. Financing equity through capital market resources is a method still used in a limited manner.

These general comments are valid for ISO Top 500 Industrial Enterprises and similar trends were observed in 2015 as well.

The share of equities of top 500 enterprises hit 50.9 percent in 2009, receded until reaching a stable trend in 2014, and started to shrink again in 2015. The equity to total assets ratio, which was 47.2 percent in 2012, dropped to 43 percent in 2014, and again to 39.9 percent in 2015. The ratio of total debt to total assets, on the other hand, increased from 52.8 percent in 2012 to 57 percent in 2014, and to 60.1 percent in 2015. Thus, the downward trend in equity to total assets ratio continued in 2015. In 2015, total

assets in current terms, equity and total debt grew at a rate of 12.8 percent, 4.6 percent and 19 percent, respectively. The balance sheet growth of the ISO 500 firms was based predominantly on borrowing in 2015. The leverage ratio of ISO 500 enterprises increased. Despite the newly emerging global financial conditions, challenges in foreign borrowing and decelerated credit growth in 2015, top 500 industrial enterprises registered growth by borrowing.

In 2015, the equity ratio of private companies fell to 37 percent while their debt-to-equity ratio climbed to 63 percent. The funding structure of the private sector showed signs of deterioration. State-owned enterprises, on the other hand, went down to 67.7 percent in terms of equity ratio while their debt-to-equity ratio rose to 32.3 percent.

The deterioration of equity in the total debt to equity ratio reemerged in 2015, after stable performance in 2014. Total debt to equity ratio, which was 112 in 2012, soared as high as to 132.4 in 2013 and 2014 and to 150.8 in 2015. This ratio went up to 170.6 for private enterprises and to 44.7 for state-owned enterprises.

While the production-based sales of ISO Top 500 Industrial Enterprises were up 7 percent in 2014; their total profit and loss before tax grew only by 4.5 percent. This means that limited internal resources were available for equity increases in 2015. This resource limited by paced down profits led to a decrease in equity ratio and an increase in the need for borrowing. Consequently, industrial enterprises financed their growth in a relatively unhealthy fashion, with further borrowing in 2015. Carrying on this trend would intensify industrial enterprises' reliance on borrowing.

Financial Structure (%)								
500 Industrial Enterprises	2008	2009	2010	2011	2012	2013	2014	2015

BASIC FINANCIAL INDICATORS

Financial Debts

The overall debt-to-equity ratio of the ISO Top 500 Industrial Enterprises in 2015 started to rise again in 2014, whereas the same rise soared to 19 percent in 2015 to reach 60.1 percent.

Total debt of the ISO 500 rose only by 7.8 percent in 2014, whereas the same rise soared to 19 percent in 2015.

The borrowing of ISO Top 500 Industrial Enterprises is examined under two main groups: financial debt and other debt. In 2015, the financial debt of ISO Top 500 Industrial Enterprises grew at a rate of 25.1 percent while other debt rose by 11.9 percent. Financial debt grew faster than other debt. Exchange rate hike and the resulting boost in TL amounts on balance sheets were among the factors underlying this fast growth.

As a result of the increase in these debt-to-equity ratios, the share of financial debt in total debt rose from 54.3 percent in 2014 to 57.1 percent in 2015. The rate of other debt, meanwhile, dropped from 45.7 percent to 42.9 percent.

Financial debt is divided into two categories: short-term and long-term debt. The share of short-term debt to total financial debt was 42.9 percent in 2014, with the figure dropping to 39.4 percent in 2015. The rate of short-term debt in other debt was 83 percent. Industrial

enterprises make use of medium to long-term financial borrowing products, which therefore leads to a continuous increase of the rate of financial debt within total debt.

The survey analyzes the sectoral breakdown of financial debt among the Top 500 Industrial Enterprises as well. As of 2015, long-term financial debt is higher than short-term financial debt in 17 out of 25 subsectors. Eight sectors, meanwhile, have higher short-term debt compared to long-term debt. In contrast with 2014, the number of sectors with higher long-term debt rose by one.

A sectoral analysis of the financial debt of ISO Top 500 Industrial Enterprises reveals an unchanged picture as regards the sectors with the highest financial debt levels. Sectors with the highest level of financial debt are metals, food products, electricity, gas, steam and air conditioning supply, motor vehicles, and textiles, respectively.

The food products, textiles and basic metals sectors continue to have relatively high financial debt, as well as high short-term financial debt. The electricity, gas, steam and air conditioning supply, motor vehicles and electrical equipment sectors have more long-term financial debt.

Debts of the Top 500 Industrial Enterprises

Financial Ratios

Current Ratio (Revolving Assets /Short-Term Debt)

The current ratio shows the capacity and power of enterprises to convert revolving assets to cash and to use the funds generated to pay short-term debt. When the revolving assets of enterprises are larger than their short-term debt, it means that they have net operating capital and the capacity to pay short-term debt.

The current ratio of ISO Top 500 Industrial Enterprises decreased from 156.3 percent in 2014 to 153.8 percent in 2015. The current ratio of private companies dropped from 150.8 percent to 148.1 percent. Meanwhile, the respective ratio in state-owned enterprises rose from 270.4 percent to 334.8 percent. The current ratio of ISO members fell from 147.5 percent to 144 percent.

The current ratio of ISO Top 500 Industrial Enterprises, which recovered in 2014, recessed again in 2015 for private companies. Enterprises' ability to pay their short-term debt was therefore reduced to a limited extent.

Total Debt/Total Assets

The total debt to total assets ratio of the ISO Top 500 Industrial Enterprises leveled up to 60.1 percent in 2015. The total debt to total assets ratio of private companies increased from 60 percent to 63 percent and that of ISO members from 58.8 percent to 63.4 percent. Meanwhile, the respective ratio in state-owned enterprises rose from 30.7 percent to 32.3 percent.

The hike in the borrowing ratio of the ISO 500 escalated once again to hit the highest level of the last four years.

Total Debt/Equity

Total debt to equity ratio leveled up to 150.8 percent in 2015. New global financial circumstances and the tightening in lending conditions in Turkey in 2014 have together contributed to the borrowing ratio coming to a halt, while the rise in profitability widened opportunities for equity generation. The subsequent lower profits in 2015, however, limited the equity growth and thus increased the need for borrowing.

Short-Term Debt/Total Debt

The reemerged upward trend in the debt ratios of the ISO Top 500 Industrial Enterprises, make the maturity structure more important. Viewed from this vantage point, the ratio of short-term debt within total debt

shrank in 2015. The short-term debt to total debt ratio has been regressing for the last four years.

The ISO Top 500 Industrial Enterprises' short-term debt to total debt ratio, which was 60.7 percent in 2014, came down to 58.1 percent in 2015. The ratio for private companies was 61.4 percent in 2014, declining to 59.4 percent in 2015. The said ratio declined from 68.2 percent to 65.2 percent among ISO members in 2015. Meanwhile, the respective ratio in state-owned enterprises plummeted from 49.8 percent to 34.4 percent.

Financial Debt/Equity

The increase in financial debt played a key role in the growth of the debt ratio among the ISO Top 500 Industrial Enterprises. Therefore, the financial debt to equity ratio is considered a significant indicator.

The financial debt to equity ratio of the ISO Top 500 Industrial enterprises experienced a surge in 2013, going up to 68.9 percent, followed by a further increase in 2014 to 71.9 percent. This surge continued in 2015. The financial debt to equity ratio of the ISO Top 500 Industrial Enterprises escalated to 86 percent in 2015, reaching 98.8 percent and 19.7 percent in private and state-owned enterprises, respectively.

Foreign currency debt constitutes a significant part of the total financial debt. The significant rise in foreign currency exchange rates in 2015 increased the TL equivalents of financial debt, thus causing a major growth in the financial debt to equity ratio.

Financial Debt/Total Assets

The financial debt to total assets ratio shows the size of financial debt industrial enterprises have in order to carry out their activities as well as their dependence on such debt.

The financial debt/total assets of ISO Top 500 Industrial Enterprises ratio was 30.9 percent in 2014 and went up to 34.3 percent in 2015. Still in the same year, the ratio was 36.5 percent for private companies, 34.8 percent for ISO members and 13.3 percent for state-owned enterprises.

Equity/Total Assets

The equity to total assets ratio shows to what extent industrial enterprises use equity to finance their activities. A high ratio demonstrates financial health.

The equity to total assets ratio of the ISO Top 500

Industrial Enterprises shrank in 2015 at 39.9 percent. The ratio dropped from 40 percent to 37 percent for private companies, from 41.2 percent to 36.6 percent for ISO members, and from 69.3 percent to 67.7 percent for state-owned enterprises.

The financial conditions that emerged in 2015 had a negative impact on profitability and limited opportunities for equity generation, which in turn decreased equity ratios.

Sectoral Financial Ratios

The ISO Top 500 Industrial Enterprises are classified under 25 sectors. The financial ratios for each sector are calculated for year 2015 and used for comparative evaluation.

The sectors with the highest current assets to short-term debt ratio were mining and quarrying at 312.1 percent and the manufacture of other transport equipment at 240.3 percent, and the lowest ratios were recorded by the manufacture of coke and refined petroleum products industry at 111.1 percent and manufacture of tobacco products at 111.3 percent.

The sectors with the highest total debt/total assets ratio are the manufacture of coke and refined petroleum products at 76.9 percent, manufacture of computer, electronic and optical products as well as manufacture of tobacco products at 74.9 percent. The sectors where the total debt to total assets ratio is lowest were the furniture industry at 34.6 percent, mining and quarrying sector at 34.8 percent, and printing and reproduction of

recorded media at 34.9 percent.

The sectors with the highest total debt to equity ratio are the manufacture of coke and refined petroleum products at 332.1 percent, manufacture of computer, electronic and optical products as well as manufacture of tobacco products at 297.8 percent. The sectors with the lowest return on sales were furniture manufacturing industry at 53 percent, and mining and quarrying at 53.4 percent.

The sectors with the highest short-term debt to total debt ratios were the manufacture of tobacco products at 98.8 percent and wearing apparel at 78.6 percent. The sectors with the lowest short-term debt to total debt ratios were electricity, gas, steam and air conditioning supply at 26.3 percent, and mining and quarrying at 29.5 percent.

The sectors with the highest financial debt to equity ratio were the manufacture of coke and petroleum products at 187.5 percent and wooden furniture industry at 151.6 percent. The manufacture of tobacco products was the sector with lowest financial debt to equity ratio at 18.7 percent.

The sectors with the highest financial debt to total assets ratio were other manufacturing industries at 49.1 percent, and the one with the lowest ratio was manufacture of tobacco products at 4.7 percent.

The sectors with the highest equity to total assets ratio were wooden furniture industry at 65.4 percent and mining and quarrying at 65.2 percent, whereas the lowest ratio belonged to the manufacture of coke and refined petroleum products at 23.1 percent.

PROFITABILITY INDICATORS

Profitability Ratios

The profitability performance of the ISO Top 500 Industrial Enterprises is calculated and evaluated using various criteria. In 2015, the number of profit-making companies decreased to 400, while 100 companies ended the year with loss.

417 companies ended 2014 with profit while 83 companies recorded loss in the same year. In 2014, the number of profitable enterprises plummeted, while the number of enterprises in loss increased.

Return on Sales

The return on sales is calculated by dividing the total profit and loss for the period by the net sales of ISO Top 500 Industrial Enterprises.

The return on sales of the ISO Top 500 Industrial Enterprises went down by 0.1 points reaching 5.6 percent in 2015.

Over the recent years, the return of sales of the ISO Top 500 Industrial Enterprises remained at low levels. Return on sales, which decreased in 2011 and 2012 to 5.6 percent and 5.7 percent respectively, and hit the lowest level in 2013 at 4.9 percent with a further drop by 0.8 percent, recovered in 2014, reaching 5.7 percent. In 2015, return on sales saw 5.6 percent.

Private enterprises suffered this recession more than the others, with return on sales falling to 5.2 percent in 2015. In state-owned enterprises, meanwhile, the return on sales, which was on a steady rise since 2009 and then had turned negative in 2014, recovered to reach a positive rate at 14.1 percent in 2015.

The sectors with the highest return on sales in 2015 were mining and quarrying at 31.3 percent, and manufacture of tobacco products at 22.1 percent. Other manufacturing industry (0.2 percent) and the manufacture of wooden furniture industry (0.8 percent) have the lowest operating profit ratios.

Return on Assets

The trend for return on assets among the ISO Top 500 Industrial Enterprises maintains a similar pattern to that of return on sales.

Return on assets is calculated by dividing the ratio of total profit and loss for the period to total assets. In 2015, the rate decreased by 0.4 percent to reach 5.6 percent. ROA that had escalated as high as 8.3 percent in 2010, regressed in the subsequent years and recovered to reach 6 percent in 2014. Recession reemerged for ROA in 2015.

The manufacture of tobacco products generated the highest return on assets at 14.9 percent in 2015. The lowest return on assets was recorded by the manufacture of beverages with 0.5 percent.

Return on Equity

Return on equity is the ratio of profit and loss for the period to total equity. It indicates the amount of profit that companies make with the equity they own and use for their activities.

This ratio remained unchanged in 2015 at 14 percent.

The trend in return on equity among the ISO Top 500 Industrial Enterprises remained stable, unlike the regressing trends in return on sales and return on assets. The return on equity of state-owned enterprises, rated negative last year, was 8.9 percent in 2015.

Manufacture of tobacco products enjoyed the highest return on equity in 2015 at 59.2 percent, followed by manufacture of coke and refined petroleum products at 37.2 percent. Manufacture of beverages had the lowest rate on equity at 0.9 percent.

PROFITABILITY INDICATORS

EBITDA

Traditionally, return on sales, return on assets and return on equity are the most frequently used profitability indicators. However, new indicators of profitability are used especially in international comparisons.

The most prominent of these indicators is earnings before interest, tax, depreciation and amortization (EBITDA). EBITDA is calculated by dividing profits before interest, amortization and tax payments by net sales revenues.

Accordingly, the absolute EBITDA of ISO Top 500 Industrial Enterprises was TL 62 billion. The figure in 2014 was TL 50.4 billion, with an increase of 23 percent.

In 2015, the top 500 enterprises' EBITDA to sales revenue ratio stood at 12.2 percent, namely 12.1 percent for private enterprises and 14.1 percent for state-owned ones. The EBITDA margins of Top 500 Industrial Enterprises grew to a limited extent in 2015. One of the key reasons behind the increase in top 500 enterprises was the EBITDA margin of state-owned enterprises hiked from 2.9 percent in 2014 to 14.1 percent in 2015.

Indicators for EBITDA (%)

2015	500 TIE	Private Companies	Public Companies
EBITDA / Sales Revenues	12,2	12,1	14,1
EBITDA / Total Assets	12,2	12,8	6,1
EBITDA / Equity Capital	30,6	34,7	9,0

In 2015, the EBITDA/total assets ratio of top 500 enterprises was 12.2 percent. The rate of private companies was 12.8 percent, while that of state-owned enterprises was 6.1 percent.

In 2015, the EBITDA/equity ratio of the top 500 companies was 30.6 percent; namely 34.7 percent for private companies and 9 percent for state-owned enterprises.

Top 500 Industrial Enterprises generated higher EBITDA margins in 2014 and 2015. In fact, the enterprises strive and manage to improve their EBITDA margins.

Earnings Before Interest, Tax, Depreciation and Amortization for the Top 500 Industrial Enterprises (EBITDA)

Cumulative Income Statement and Analysis

The aggregates and ratios in the cumulative income statements of ISO Top 500 Industrial Enterprises 2015 include important information on profitability.

The cost of sales to net sales ratio of the ISO Top 500 Industrial Enterprises was 83.1 percent. Consequently, the gross sales profit realized was recorded as 16.9 percent. The operating expenses to net sales ratio accounted for 8.2 percent, leading to an 8.7 percent operating profit by the ISO Top 500 Industrial Enterprises.

Compared to 2014, the cost of sales dropped by 2.4 points while operating expenses increased by 0.1 point. The net 2.3-point fall in costs drove up the operating profit ratio from 6.4 percent in 2014 to 8.7 percent in 2015.

In 2015, the ratio of income and profit from other operations to net sales was 12.2 percent, 9.9 points of which come from FX gains. The ratio of expenses and losses from other operations to net sales was 9.6 percent, 8.8 points of which stem from FX losses.

ISO 500 enterprises generated 2.6 points of income and profit from other operations in 2015. The net FX gains amounted to 1.1 percent. In other words, the appreciation of foreign currency boosted profitability.

The 2.6-point income and profit from other operations increased the profitability before financial expenses of ISO Top 500 Industrial Enterprises. The figure therefore rose to 11.2 percent.

In 2015, the ratio of financial expenses to net sales was 5.5 percent, up 2.1 points from the previous year. ISO Top 500 Industrial Enterprises achieved 5.7 percent ordinary profit after financial items in 2015.

Taking into account extraordinary revenues and profits (0.8 percent), and extraordinary expenses and losses (0.9 percent), the pre-tax profitability of the ISO Top 500 Industrial Enterprises in 2015 amounted to 5.6 percent.

Pre-tax profitability shrank by 0.1 points, down from 5.7 percent in 2014.

PROFITABILITY INDICATORS

Operating Profit

Operating profit is another profitability indicator used to measure the profitability of an enterprise. Operating profit is calculated by deducting operating expenses from gross sales profit and dividing the resulting figure by net sales.

The operating profit of the ISO Top 500 Industrial Enterprises was 8.7% in 2015. The total operating profit was TL 44.1 billion in absolute terms. Operating profit in absolute terms grew by about TL 13.6 billion in 2015 year-on-year. The underlying reason for the decline in operating profitability was the relatively slower increase in sales costs.

The highest absolute operating profit was generated by

manufacture of basic metals sector at TL 5.5 billion. It is followed by the food products manufacturing industry at TL 5 billion.

The sectors with the highest operating profit are the manufacture of other transport equipment at 21.3 percent and manufacture of tobacco products at 20.9 percent. Other manufacturing (0.7 percent), and leather and leather goods industry (2.5 percent) have the lowest operating profit ratios.

The electricity, gas, steam and air conditioning supply sectors, which had recorded loss in 2014, made TL 3.7 billion operating profit in 2015.

Operating Profit of the Top 500 Industrial Enterprises

Sectors		Operating Profit	Operating Profit / Sales Revenues (Net)

Non-operating Revenues

The ISO Top 500 Industrial Enterprises survey takes account of non-operating revenues in calculations and analyses, mainly for two reasons. The first one is to see the impact of non-operating revenue on profitability (or loss).

And secondly, non-operating revenue needs to be calculated separately in order to calculate ISO Top 500 Industrial Enterprises' profit and value added generated as national income. The value added generated by enterprises is calculated through revenues or factor income payments.

Profit as national income is also calculated, which corresponds to the share of manufacturers as factor income. In order to find the factor income of profit as national income, non-operating revenues are deducted from pre-tax total profit and loss for the period and the provisions allocated from profit for that year are added to the difference.

Non-operating revenue comprises dividend income, revenues from participations, interest revenues, net profits from FX, and sale of movables and fixed assets.

Non-operating revenue and its share in total profit and loss have been fluctuating over the past years. The ISO Top 500 Industrial Enterprises' non-operating revenue shrank by 21.5 percent to TL 7.5 billion in 2013 but increased by 80.6 percent in 2014 reaching TL 13.6 billion. In 2015, non-

operating revenue dropped to TL 12.9 billion, down by 4.9 percent. This marked the first decrease in non-operating revenue after three years. This recession was partly due to reduction in net profits and income from FX

On another front, the ratio of non-operating revenue to total profit and loss, which had grown to reach 50.3 percent in 2014, shrank to 45.7 percent in 2015. The recession in non-operating revenue was one of the factors limiting the increase in absolute profits.

In 2015, the non-operating revenue of private companies fell by 8.4 percent, from 11.9 billion to TL 10.9 billion. The share of non-operating revenue in total profit and loss for the period dropped to 42.9 percent.

In 2015, non-operating revenue for state-owned enterprises reached TL 2.1 billion, up by 19.3 percent. The share of state-owned enterprises in total profit and loss for the period saw 70.7 percent.

A sectoral analysis shows that as was the case in 2013 and 2014, mining and quarrying tops the 2015 list with the highest ratio of non-operating revenue to total net sales at 29.1 percent. The ratio was 11.6 percent and 5.8 percent, for the manufacture of beverages sector, and leather and leather goods industry, respectively. The figures in many other manufacturing sectors maintain their considerably low levels.

Non-Operating Revenues (Net) (ISO 500 Industrial Enterprises)

	Non-Operating Revenues (1)	Change (%)	Total Profit and Loss for the Period (Before Tax) (2)	Change (%)	1/2 (%)

VALUE ADDED, EFFICIENCY and PRODUCTIVITY

Distribution of Net Value Added

The calculation of value added generated by the industrial enterprises in the ISO 500 survey is based on the factor income payments for factors of production. Therefore, the survey compiles data on the factor incomes the enterprises pay for factors of production.

Data on wages and salaries paid (including workforce shares as full compensation and social security premiums paid by the employer), labor as a factor of production, interest paid for capital and profit as national income for the producers' share are collected to calculate the value added generated by ISO 500 enterprises.

Amortization set aside for the period and net indirect taxes (indirect taxes and subsidies) are added to the net value added to calculate gross value added at basic prices and producers' prices for each enterprise.

The survey examines and analyzes net value added and the share of the factor incomes that constitute them.

Among ISO Top 500 Industrial Enterprises, the share of wages and salaries paid in the distribution of factor incomes to net value added fell from 57.5 percent to 56.5 percent, whereas the share of interest paid rose from 14.3 percent to 15.4 percent and that of profit as national income was recorded as 28.2 percent. The sharpest decline in the share of profit as national income since 2010 was stabilized in 2015.

While private companies experienced minor fluctuation in the distribution of net value added in factors of production, fluctuation was wider in public companies. Private companies' share of profit as national income dropped to 28.4 percent in 2015, down from 33.2 percent in 2014. As for the state-owned enterprises, the negative profit as national income in 2014 turned to positive in 2015 at 25.8 percent. Seen in this light, the profit as national income by Top 500 Industrial Enterprises was maintained in 2015 largely due to the positive performance of state-owned enterprises.

Distribution of Net Value Added by Factor Income (%)

VALUE ADDED, EFFICIENCY and PRODUCTIVITY

Employment and Gross Value Added

The ISO 500 survey addresses 25 subsectors according to the NACE Rev. 2 sectoral classification by their share in employment, gross value added and relative output ratios.

In 2015, the food manufacturing industry recorded the highest employment share at 19.7 percent among the sectors in the ISO 500 survey. It is followed by the manufacture of motor vehicles at 14 percent, manufacture of textiles at 8.9 percent, manufacture of basic metals at 7.8 percent and manufacture of electrical equipment at 7.8 percent. The top five sectors are the same as in 2014.

The sector with the highest share of total gross value added in the 2015 ISO 500 survey was the manufacture of coke and refined petroleum products at 22.9 percent. Manufacture of tobacco products industry is ranked second with 17.7

percent, which is followed by the manufacture of motor vehicles at 8.1 percent.

The relative output ratio is calculated by dividing the gross value added per person generated by ISO 500 manufacturing industry subsectors to the value added per person generated by the manufacturing sector. Relative output ratios reveal the value added efficiencies of subsectors.

The highest relative output ratio in 2015, on the other hand, was once again generated by tobacco products manufacturing, coke and refined petroleum products industry and the beverages manufacturing industry. Other manufacturing, leather and leather goods industry, and manufacture of wearing apparel had the lowest relative output ratios.

Distribution of Employment and of Gross Value Added and Relative Output Ratio

Asset Turnover Ratio

Asset Turnover Ratio

The asset turnover ratio is an indicator of productivity and efficiency of activities and is the ratio of sales revenues to total assets. A high asset turnover ratio means high efficiency and productivity.

The asset turnover ratio of the ISO Top 500 Industrial enterprises has been decreasing over the years. The ratio went as down as 1 in 2015. The asset turnover ratio went up as high as to 1.23 in 2011, only to be followed by a steady decline for the four consecutive years. Especially, the overlapping payment schedule in domestic market is particularly consequential in the fall of asset turnover ratio. The ratio in private companies is slightly higher than average. Asset turnover ratio of private companies nevertheless dropped to 1.06 in 2015. Turnover rate in state-owned enterprises, meanwhile, is significantly low. The rate after limited recession was 0.43 in 2015.

Other manufacturing industry had the highest asset turnover ratio in 2015 at 6.55. The lowest ratio was observed in mining and quarrying sector at 0.31.

Equity Turnover Ratio

Another indicator of efficiency and productivity is the equity turnover ratio, that is net sales divided by equity.

The equity turnover ratio of ISO 500 enterprises was 2.50 in 2015, up by 0.06 points year-on-year, which stopped the recession of equity turnover ratio over the last couple of years. Equity turnover ratio was 2.87 in private companies in 2015, up by 0.07 points.

Asset Turnover Ratio (Sales Revenues / Total Assets)			
	500 TIE	Private Companies	Public Companies
2010	1,08	1,20	0,45
2011	1,23	1,34	0,48
2012	1,18	1,28	0,46
2013	1,09	1,16	0,53
2014	1,05	1,12	0,45
2015	1,00	1,06	0,43

In 2015, the other manufacturing industry had the highest equity turnover ratio at 15.46, and manufacture of coke and refined petroleum products sector at 7.81. The lowest ratio meanwhile was observed in mining and quarrying sector at 0.48.

Working Capital (Revolving Capital) Turnover Ratio

The working capital turnover ratio is the proportion of sales revenues to revolving capital (working capital).

The working capital turnover of the ISO Top 500 Industrial enterprises was 1.93 in 2013, 1.94 in 2014, and 1.86 in 2015.

In 2015, the other manufacturing industry had the highest working capital turnover ratio at 7.15, and manufacture of coke and refined petroleum products sector at 4.33. The lowest ratio was observed in the manufacture of other transport equipment at 0.70

Labor Productivity

Labor productivity is an important productivity indicator for industry and for industrial enterprises.

The proportion of production-based sales to number of employees gives labor productivity for ISO 500. Labor productivity is based on net production-based sales per employee at current prices. The data available covers these past three years since the NACE Rev. 2 classification has been adopted for sectors.

The net production-based sales per employee of the ISO Top 500 Industrial Enterprises was TL 658,385 in 2014, and increased by 5.5 percent to reach TL 694,781 in 2015. The net production-based sales per employee decreased in real terms in comparison with the inflation at consumers' and producers' prices and national income deflator in 2015.

There are significant differences among subsectors in terms of net production-based sales per employee. While production-based sales per employee increased in 21 subsectors in absolute terms in comparison with 2014, there was a decrease in four subsectors in 2014. In 2015, the sectors with the highest labor productivity according to the net production-based sales per employee were the manufacture of coke and petroleum products, manufacture of tobacco products, other manufacturing and manufacture of basic metals.

The same method is used to calculate labor productivity in the public and private sectors and to analyze the subsectors. The net production-based sales per employee in private companies stood at TL 715.684, up 3.6 percent in 2015. Labor productivity in state-owned enterprises increased by 23.4 percent to reach TL 425.560 in 2015.

TECHNOLOGICAL ACTIVITIES

Research and Development Activities

Technological activities have become one of the leading factors shaping the competitiveness and hence the profitability and productivity of industry and industrial enterprises.

Therefore, ISO Top 500 Industrial Enterprises survey started to include information on technological activities as of 2013.

In 2015, there are two sets of data under technological activities. The first is R&D spending by the ISO Top 500 Industrial Enterprises. The second is the sectoral breakdown of technology intensity.

The R&D expenditures of the Top 500 Industrial Enterprises are calculated and evaluated through two methods: surveys and the income statements of enterprises.

The survey data for 2015 reveal that the R&D expenditures of ISO Top 500 Industrial Enterprises

was TL 3.35 billion, with a 7 percent jump from the previous year's 3,31 billion.

The ratio of R&D expenses calculated through survey data to production-based sales in 2015 was 0.74 percent, as was the case in 2014.

According to income statement data, R&D expenses amounted to TL 2.48 billion, thus revealing an 18.6 percent increase from the TL 2.09 billion of 2014.

The ratio of R&D expenditure according to the income statements to production-based sales rose from 0.50 percent to 0.55 percent in 2015.

The sectors with the highest R&D expenses (according to survey data) were mining and quarrying at TL 982 million, manufacture of motor vehicles at TL 929 million, and manufacture of electrical equipment at TL 310 million.

R&D Expenses of the ISO 500 Industrial Enterprises

Sectors		R&D Expenses (Survey Data)	R&D Expenses (Income Statement Data)
05-09	Mining and Quarrying	981.911.283	978.121.241
10	Manufacture of Food Products	198.666.932	198.635.682
11	Manufacture of Beverages	1.706.762	1.706.762

Total		3.351.411.051	2.479.247.439

TECHNOLOGICAL ACTIVITIES

Generated Value Added by Technology Intensity

The survey reveals value added distribution among ISO 500 companies within technology intensive sector groups.

Technology intensive sectors include solely the companies in the manufacturing industry. The mining and quarrying as well as electricity, gas, steam and air conditioning supply sectors are not included in this analysis. Therefore, the calculation and analysis are based on data from 477 manufacturers.

Technology intensive industries are segmented into four groups, namely low technology, medium-low technology, medium-high technology and high technology intensive industries.

The table shows the technology intensive industrial sectors according to the recently adopted NACE Rev. 2 industrial classification.

The value added is the indicator used for technology intensive sectoral groups. The value added is an indicator of “gross value added at producers’ prices” (payment for factors of production (wages and salaries paid + interest paid + profit as national income) + amortization set aside for the year + total indirect taxes - subsidies).

The below table indicates the value added generated by the sectors in the ISO 500 and the share of these sectors in total value added. Accordingly, the sector with the highest value added is the manufacture of coke and refined petroleum products at 24.1 percent,

followed by the manufacture of tobacco products at 18.6 percent.

The technology intensive sectors are divided into subgroups. Accordingly, in 2015, medium-low technology intensive industries accounted for the highest share of value added at 39 percent, while that of low technology intensive industries fell to 38.9 percent, down by 1.1 points. In 2014, meanwhile, the highest share of value added was low technology intensive industries at 40 percent, which was replaced by medium-low technology in 2015.

The medium-low technology intensive industries’ share increased to 39 percent, up from 37.4 percent in 2014.

The medium- high technology intensive industries group’s share decreased to 18.9 percent, down from 19.4 percent in 2014.

Meanwhile, the high technology intensive industries group’s share remained unchanged in 2015 at 3.2 percent.

The need for Turkey to transform its industry to high value added and high technology intensive industries persists. However, ISO Top 500 Industrial Enterprises survey results demonstrate the lack of progress in this area over the last three years. The share of the value added generated by ISO Top 500 Industrial Enterprises operating in medium-high and advanced technology intensive sectors was limited to 22.1 percent.

Distribution of Value Added by Technology Intensity (%)

Distribution of Value Added by Technology Intensity

Sectoral Groups Based on Technology Intensity	Total Gross Value-Added	Share of Total Gross Value-Added	Code	Sectors	Total Gross Value-Added	Share of Total Gross Value-Added

NOTES:

- 1-The term "Public" in the Affiliated Chamber column refers to state-owned enterprises (SOE) such as Municipal Economic Enterprises (MEE) or State Economic Enterprises (SEE).
- 2-All companies indicated as other than "Public" in the above-mentioned column are private companies and their affiliated Chambers of Industry, Chambers of Commerce, or Chambers of Commerce and Industry are shown.
- 3-The Top 500 Industrial Enterprises are ranked by their net production-based sales in 2015.
- 4-The item "Sales Revenue (Net)" is the sum of company's net production-based sales and other sales (sales outside the industrial activity) in 2015.

5-In the table above, in addition to their overall ranks, the companies' ranks in their sector (public or private) are shown in the columns next to the column showing the ranks for production-based sales.

6-In the part where the companies are ranked by their production-based sales, a dash (-) next to a rank number indicates that the company at that rank wished to remain anonymous.

7-Members of the Istanbul Chamber of Industry are written in bold. Those companies may also have membership at other Chambers.

8-Grand totals of "Profit for the Period" and "Earnings Before Interest, Tax, Depreciation and Amortization (EBITDA)" are shown as Net Profit (Profit minus Loss = Net Profit).

RESULTS OF THE ISO 500 SURVEY

The Istanbul Chamber of Industry (ISO) published "Turkey's Top Industrial Enterprises" 2015 Survey results in the Chamber's journal, special June 2016 issue.

Covering only the industrial companies, ISO Top 500 Industrial Enterprises ranks the companies by their production-based sales figures. Therefore, the industrial activity constitutes the major criterion. These industrial activities include the mining and quarrying, manufacturing, electricity, gas, steam and air conditioning supply sectors.

The 2015 ISO Top 500 Industrial Enterprises include 491 private and 9 state-owned companies, as well as 49 new entrants.

Top Companies by Production-Based Sales

According to the ISO Top 500 Industrial Enterprises 2015 survey, the largest enterprise according to production-based sales is «TÜPRAŞ - Türk Petrol Rafinerileri A.Ş.». Production-based sales of TÜPRAŞ constitute 7.9 percent of the total sales of the top 500 companies. In 2015, "Ford Otomotiv Sanayi A.Ş." and "Arçelik A.Ş." came second and third, respectively, for their production-based sales figures.

Top Companies by Value Added

In 2015, the company that generated the highest value added according to producers' prices was «TÜPRAŞ Turkish Petroleum Refineries Co.», creating 19.6 percent of the total value added by top 500 in 2015. The runner-up prefers to remain anonymous. The third company was "JTI Tütün Ürünleri Sanayi A.Ş."

Top Profit-Makers

Compared to previous year, the 2015 list witnessed major changes vis-a-vis top profit-makers. The top profit-maker of 2015 was "TÜPRAŞ-Türkiye Petrol Rafinerileri A.Ş.", which was followed by "Eti Maden İşletmeleri Genel Müdürlüğü" and "Ereğli Demir ve Çelik Fabrikaları T.A.Ş.", last year's champion, in this order. Seven out of 10 top profit-makers of 2014 entered the 2015 list as well. There are three public and seven private companies among the top 10 profit-makers.

Top Exporters

The top three exporters in 2015 were "Ford Otomotiv Sanayi A.Ş.", "TÜPRAŞ-Türkiye Petrol Rafinerileri A.Ş." and "Oyak-Renault Otomobil Fabrikaları A.Ş.". All of the top 10 exporters in 2015 were from the private sector. Nine out of ten biggest exporters were on the top ten list in 2014 as well. One new enterprise made it to the list in 2015, pushing another out of the top ten.

Basic Indicators

Economic Aggregates

The net production-based sales of the ISO 500 companies increased by 7 percent at current prices amounting to TL 450.5 billion in 2015. While the private companies enjoyed an increase of 7.5 percent, the state-owned enterprises suffered from a drop of 3.9 percent. The net sales revenue grew by 7.5 percent to reach TL 508.1 billion.

The exports of the ISO Top 500 Industrial enterprises decreased to \$53.4 billion, down 12.9 percent in 2015. Hence total exports of ISO Top 500 Industrial enterprises showed a downward trend for three consecutive years. Export figures of private and state-owned companies decreased by 13.1 percent and 1 percent, respectively. The export decline was more intensely than the recession in overall Turkey.

As a result, the total pre-tax profits and losses of the ISO 500 rose to TL 28.3 billion with an increase of 4.5 percent. Total profits and losses decreased by 7.7 percent at private companies, unlike state-owned enterprises which recorded high profits. The profit increase for ISO Top 500 Industrial Enterprises in 2015 was led by state-owned enterprises.

In 2015, ISO Top 500 Industrial Enterprises registered TL 62 billion of EBITDA. The ratio of earnings before interest, tax, depreciation and amortization to net sales revenues was 12.2 percent

Total debt of ISO 500 enterprises went up by 19 percent in 2015, the breakdown of the increase is 19.7 percent and 8.5 percent for privately and publicly held enterprises, respectively. The share of short-term debt in overall debt increased by 13.9 percent and that of

the long-term debt increased by 27 percent. Borrowing of ISO 500 geared up dramatically in 2015.

The financial debt of ISO 500 companies grew faster than their total debt in 2015 at a rate of 25.1 percent. Financial debt of private companies and state-owned enterprises went up by 24.6 percent and 38.6 percent, respectively. State-owned enterprises incurred high and predominantly financial debt.

The total equity of ISO Top 500 Industrial enterprises grew by 4.6 percent in 2015, reaching TL 202.8 billion. The equity of private and state-owned enterprises grew by 5.4 and 0.6 percent, respectively.

On another front, total assets of ISO 500 increased faster than equity, 12.8 percent to be specific. In 2015, ISO Top 500 Industrial Enterprises supported their growth mainly with their resources rather than equity.

In 2015, the ISO 500 paid TL 9.7 billion interest, corresponding to a rise of 20.6 percent year-on-year. The interest paid by private companies went up by 21.9 percent, and that of state-owned enterprises reduced by 10.7 percent.

The ISO Top 500 Industrial Enterprises generated TL 63.4 billions of net value added at factor prices, up by 12.5 percent year-on-year. The net value added went up by 7.7 percent and 134.2 percent for private companies and state-owned enterprises, respectively.

The gross value added at basic prices generated by ISO 500 went up by 11.8 percent in 2015. Private companies and state-owned enterprises registered 8.7 percent and 74.1 percent growth respectively in the gross value-added at basic prices. The gross value added at producers' prices of the ISO 500 enterprises increased by 16.5 percent. The gross value added at producers' prices went up by 15.2 percent and 54.4 percent in private companies and state-owned enterprises, respectively.

The faster rise of the value added at producers' prices than the value added at factor and basic prices is partly caused by higher indirect taxes paid by the enterprises in year-on-year.

Another important development in 2015 was that state-owned enterprises positively contributed to all value-added numbers.

Weight of the Top 50 Industrial Enterprises

In 2015, the top 50 enterprises accounted for 48.8 percent of total production-based sales, 55.5 percent of gross value added, 44 percent of pre-tax total profit and loss for the period, 43.7 percent of earnings before interest, tax, depreciation and amortization, and 53 percent of exports.

The gross value added at producers' prices generated by the top 50 enterprises to Turkey's GDP reached 4.3 percent in 2015. The top 50 slightly increased their share in GDP. 19.5 percent share of top 50 in exports in 2014 slightly rose to 19.7 percent in 2015.

Exports Performance

Economic policies implemented in Turkey aim to strengthen the contribution of net exports and exports to economic development. Exports therefore play a vital role in economic activities. In 2015, ISO Top 500 Industrial Enterprises saw \$53.4 billion exports with a 12.9 percent decline year-on-year, and accounted for 37.2 and 38.9 percent of Turkey's overall and industrial exports, respectively.

From a broader perspective, exports in manufacturing industry dropped by 12.4 percent, mining and quarrying by 40 percent, and electricity, gas, steam and air conditioning supply by 46.3 percent. In 2015, exports constituted 28.5 percent of total net sales of ISO Top 500 enterprises, with a slight upturn.

Foreign Invested Enterprises

In 2015, the number of foreign-invested companies among the ISO Top 500 Industrial Enterprises declined by one, totaling 125. This number has been consistently declining since 2009. However, the declining trend slowed down in 2015.

In 2015, 125 foreign invested companies in the ISO 500 accounted for 31.1 percent of total production-based sales, 39.9 percent of gross value added, 32 percent of total profit and loss for the period, 29.6 percent of EBITDA and 42.1 percent of exports. Foreign invested enterprises realized \$22.5 billion exports in 2015, corresponding to 15.6 percent of Turkey's total exports.

Despite the serious decline in the number of foreign invested companies in 2015, their share in the fundamental indicators of top 500 did not change much.

RESULTS OF THE ISO 500 SURVEY

ISO Members among the Top 500 Industrial Enterprises

In 2015, there were 182 ISO member enterprises among the ISO 500, eight fewer than 2014. For the last three years, ISO members have been declining in number at the ISO 500 list.

With the number of ISO members falling back from 190 to 182 in the ISO 500 list in 2015, their share in the ISO 500 list was diminished in terms of fundamental indicators, as well. ISO members' share in net production-based sales was 44 percent in 2015, up from 43.9 percent in 2014, while their share in net sales decreased from 45.6 percent to 45.4 percent. As for gross value added at producers' prices, the ISO members' share was 41.1 percent in 2015, down from 44.5 percent in 2014.

Basic Financial Indicators

Financial Structure

On a steady decline since 2009, the share of equities of top 500 enterprises receded until reaching a stable trend in 2014, and started to shrink again in 2015. The share of equities in total assets decreased to 39.9 percent, down from 43 percent in 2014. The negative development in the equities of the financial structure of Top 500 Industrial Enterprises, which came to a standstill in 2014, resumed on in 2015.

The total debt to equity balance, which so far tipped to the detriment of equity, maintained its negative development in 2015. The debt-to-equity ratio, recorded 132.4 in 2013 and 2014, increased to 150.8 in 2015. This ratio went up to 170.6 for private enterprises and to 44.7 for state-owned enterprises.

The ISO Top 500 Industrial Enterprises saw only a 4.5 percent increase in total profit and loss before tax. The companies thereby created a limited amount of internal resources for their equity growth in 2015. This resource limited by paced down profits slowed down the rise in equity yet led to an increase in the need for borrowing. Consequently, in 2015, industrial enterprises financed their growth through external resources and in a relatively unhealthy way.

Financial Debts

The overall debt ratio of the ISO Top 500 Industrial Enterprises in 2015 started to rise again in 2015 to reach 60.1 percent. Total debt of the ISO 500, which had increased only by a marginal 7.8 percent in 2014, rose by 19 percent in 2015.

In 2015, financial debt of ISO Top 500 Industrial Enterprises grew at a rate of 25.1 percent while other debt rose by 11.9 percent. Financial debt grew faster than other debt. Exchange rate hike and the resulting boost in TL amounts on balance sheets were among the factors underlying this fast growth.

As a result of the increase in these debt-to-equity ratios, the share of financial debt in total debt rose from 54.3 percent in 2014 to 57.1 percent in 2015. The rate of other debt, meanwhile, dropped from 45.7 percent to 42.9 percent.

Financial debt is divided into two: short-term and long-term debt. The share of short-term debt to total financial debt was 42.9 percent in 2014, with the figure dropping to 39.4 percent in 2015. Industrial enterprises make use of medium to long term financial borrowing products which therefore leads to a continuous increase of the rate of financial debt within total debt.

Financial Ratios

Current Ratio (Revolving Assets /Short-Term Debt)

The current ratio of ISO Top 500 Industrial Enterprises, which recovered in 2014, recessed again in 2015 for private companies. This reduced the enterprises' ability to pay their short-term debt.

The current ratio of ISO Top 500 Industrial Enterprises decreased from 156.3 percent in 2014 to 153.8 percent in 2015. The current ratio of private companies dropped from 150.8 percent to 148.1 percent. Meanwhile, the respective ratio in state-owned enterprises rose from 270.4 percent to 334.8 percent. The current ratio of ISO members fell from 147.5 percent to 144 percent.

Total Debt/Total Asset

In 2015, the ratio of total debt to total assets among the ISO Top 500 Industrial Enterprises climbed 3.1 points

to reach 60.1 percent. The increase in the debt ratio of the Top 500 Industrial Enterprises resumed hitting the highest level in four years.

Total Debt / Equity Capital Ratio

Total debt to equity ratio hiked to 150.8 percent in 2015. Despite the newly emerged global financial conditions and slower credit growth in the domestic market, the debt ratio figures escalated in 2015. The lower profitability rates in 2015 limited the equity generation opportunities, as well. Consequently, enterprises resorted to borrowing more than the previous years, generating equity at a limited pace in 2015.

Short-term Debt / Total Debt

Despite the standstill in ISO Top 500 Industrial Enterprises, high levels of borrowing ratio bring the debt maturity structure to notice. The rate of short-term debt within total debt continued to go down in 2015, as well. While the short-term debt to total debt ratio of ISO Top 500 Industrial Enterprises was 69 percent in 2010, it dropped to as low as 58.1 percent in 2015.

Financial Debts/Equity

The financial debt to equity ratio of the ISO Top 500 Industrial Enterprises grew significantly in 2015, as was the case in 2013 and 2014. The share of the top 50 companies in total production-based sales increased to 86 percent in 2015, up from 68.9 percent in 2013 and 71.9 percent in 2014. reaching 98.8 percent and 19.7 percent in private and state-owned enterprises, respectively.

Foreign currency debt constitutes a significant part of the total financial debt. The rise in foreign currency exchange rates in 2015 increased the TL equivalents of financial debt, thus causing a minor growth in the financial debt to equity ratio.

Equity/Total Assets

The equity to total assets ratio of the ISO Top 500 Industrial Enterprises shrank in 2015 at 39.9 percent. This ratio fell from 40 to 37 percent for private companies, and from 69.3 to 67.7 for state-owned enterprises. The financial conditions that emerged in 2015 had a negative impact on profitability and limited opportunities for equity generation, which in turn decreased equity ratios.

Profitability Indicators

The number of profitable companies among ISO Top 500 Industrial Enterprises was 400 in 2015, in contrast to a total of 100 unprofitable companies 417 companies ended 2014 with profit while 87 companies recorded loss in the same year. In 2015, the number of profitable enterprises decreased, while the number of enterprises in loss increased.

Return on Sales

In recent years, the return of sales of the ISO Top 500 Industrial Enterprises has been fluctuating at low levels. The return on sales of the ISO Top 500 Industrial Enterprises went down by 0.1 points reaching 5.6 percent in 2015. As such, the respective figures, which had recovered in 2014, fell again in 2015.

Private enterprises suffered this recession more than the others. In 2015, the return on sales of private companies became 5.2 percent, down by 0.9 points. Meanwhile, state-owned enterprises saw an upturn in 2015 to rich 14.1 percent, following the negative rate of 2014.

Return on Assets

In 2015, return on equity dropped by 0.4 points to see 5.6 percent. The return on assets, which soared as high as to 8.3 percent in 2010 and saw a decline in the subsequent three years, recovered in 2014. The recession reemerged in 2015, even if limited.

Return on Equity

Return on equity remained unchanged at 14 percent in 2015. The trend in return on equity among the ISO Top 500 Industrial Enterprises did not go down in 2015, unlike those of return on sales and return on assets.

Earnings Before Interest, Tax, Depreciation and Amortization

The ISO Top 500 Industrial Enterprises 2013 survey calculated and analyzed EBITDA for the first time in 2013 and maintained this practice in 2014 and 2015.

Accordingly, the absolute EBITDA of ISO Top 500 Industrial Enterprises was TL 62 billion in 2015. The figure in 2014 was TL 50.4 billion.

In 2015, the top 500 enterprises' EBITDA to sales revenue ratio stood at 12.2 percent, namely 12.1

RESULTS OF THE ISO 500 SURVEY

percent for private enterprises and 14.1 percent for state-owned ones. In 2015, the EBITDA/total assets ratio of top 500 enterprises was 12.2 percent. The rate of private companies was 12.8 percent, while that of state-owned enterprises was 6.1 percent. In 2015, the EBITDA/equity ratio of the top 500 companies was 30.6 percent; namely 34.7 percent for private companies and 9 percent for state-owned enterprises.

The EBITDA margins of Top 500 Industrial Enterprises saw higher values in 2015. This increase was due to significantly improved EBITDA rates of state-owned enterprises and private companies' increasing focus on EBITDA figures.

Cumulative Income Statement and Analysis

The cost of sales to net sales ratio of the ISO Top 500 Industrial Enterprises was 83.1 percent. Consequently, the gross sales profit realized was recorded as 16.9 percent. The operating expenses to net sales ratio accounted for 8.2 percent, leading to an 8.7 percent operating profit by the ISO Top 500 Industrial Enterprises.

ISO 500 enterprises generated 2.6 points of income and profit from other operations in 2015. The net FX gains amounted to 1.1 percent. In other words, the appreciation of foreign currency improved profitability. ISO Top 500 Industrial Enterprises registered 11.2 percent profitability before financial expenses. In 2015, the ratio of financial expenses to net sales was 5.5 percent. ISO Top 500 Industrial Enterprises achieved 5.7 percent ordinary profit after financial items in 2015. In 2015, ISO Top 500 Industrial Enterprises made 5.6 percent pre-tax profitability through extraordinary net revenues and profits. Pre-tax profitability shrank by 0.1 points in 2015, down from 5.7 percent from the previous year.

Operating Profit

The operating profit of the ISO Top 500 Industrial Enterprises was 8.7 percent in 2015. The total operating profit was TL 44.1 billion in absolute terms. Operating profit in absolute terms grew by about TL 13.6 billion in 2015 year-on-year. This growth was driven by the recession in costs of sales.

Non-operating Revenues

Non-operating revenues and their share in total profit and loss have been fluctuating over the past years.

The non-operating revenue of ISO Top 500 Industrial Enterprises shrank by 21.5 percent in 2013, increased by 80.6 percent in 2014, and recessed by 4.9 percent to TL 12.9 billion in 2015. Non-operating revenue has had different effects on total revenue and profitability over the years.

The ratio of non-operating revenue to total profit and loss for the period was 34.1 percent, 50.3 percent, and 45.7 percent in 2013, 2014 and 2015, respectively. The slowdown in non-operating revenue is one of the reasons for the stable course of absolute profit.

Value Added, Efficiency and Productivity

Factor Income Distribution of Net Value Added

Among ISO Top 500 Industrial Enterprises, the share of wages and salaries paid in the distribution of factor incomes to net value added rose from 57.5 percent to 56.5 percent, whereas the share of interest paid rose from 14.3 percent to 15.4 percent and that of profit as national income was recorded as 28.2 percent.

The sharp decline in shares of the profit as national income since 2010 came to a halt in 2015. Private companies experienced minor fluctuations in the distribution of net value added in factors of production, fluctuations were wider in state-owned enterprises.

Employment, Distribution of Gross Value Added and Relative Output Ratios

In 2015, the food manufacturing industry recorded the highest employment share at 19.7 percent among the sectors in the ISO 500 survey. It is followed by the manufacture of motor vehicles at 14 percent, manufacture of textiles at 9.9 percent, manufacture of basic metals at 8.9 percent, and manufacture of electrical equipment at 7.8 percent.

The sector with the highest share of total gross value added in the 2015 ISO 500 survey was the manufacture of coke and refined petroleum products at 22.9 percent. Manufacture of tobacco products industry is ranked second with 17.7 percent, which is followed by the manufacture of motor vehicles at 8.1 percent.

Manufacture of tobacco products, manufacture of coke and refined petroleum products and the manufacture

of beverages were the sectors with the highest relative output ratio in 2015.

Asset Turnover Ratio

The asset turnover ratio of the ISO Top 500 Industrial enterprises has been decreasing over the years. This ratio dropped to 1 in 2014. The overlapping payment schedule is particularly consequential in the fall of asset turnover ratio.

Equity Turnover Ratio

The equity turnover ratio of ISO 500 enterprises was 2.50 in 2015, which marked the halt of an ongoing recession for the last couple of years.

Working Capital (Revolving Capital) Turnover Ratio

The working capital turnover of the ISO Top 500 Industrial Enterprises was 1.94 in 2014 and 1.86 in 2015.

Labor Productivity

The net production-based sales per employee of the ISO Top 500 Industrial Enterprises was TL 658,385 in 2014, and increased by 5.5 percent to reach TL 694,781 in 2015. The net production-based sales per employee decreased in real terms in comparison with the inflation at consumers' and producers' prices and national income deflator in 2015. While production-based sales per employee increased in 21 subsectors in absolute terms in comparison with 2015, there was a decrease in four subsectors in 2014.

Technological Activities

Research & Development Activities

The survey data for 2015 reveals that the R&D expenditure of the ISO Top 500 Industrial Enterprises

was TL 3.35 billion, indicating a rise of 7 percent compared to 2014.

The ratio of R&D expenses calculated through survey data to production-based sales in 2015 was 0.74 percent, as was the case in 2014.

According to 2015 income statement data, R&D expenses amounted to TL 2.48 billion, with an 18.6 percent increase year-on-year.

The ratio of R&D expenditure according to income statements to production-based sales rose from 0.50 percent to 0.55 percent in 2015.

Generated Value Added by Technology Intensity

The low technology intensive industries that had the highest share in 2014 were replaced by medium-low technology intensive industries in 2015.

In 2015, medium-low technology intensive industries raised to 39 percent share in 2015 while that of low technology intensive industries fell to 38.9 percent.

The medium-high technology intensive industries group's share decreased to 18.9 percent, down from 19.4 percent in 2014. Meanwhile, the high technology intensive industries group's share remained unchanged in 2015 at 3.2 percent.

The share of the value added generated by ISO Top 500 Industrial Enterprises operating in medium-high and advanced technology intensive sectors was limited to 22.1 percent.

The results of the ISO Top 500 Industrial Enterprises 2015 survey shows that the progress in increasing the share of medium-high and advanced technology intensive sectors over Turkey's industry came short of the necessary rates once again.

METHODOLOGY AND DEFINITIONS

Turkey's Top 500 Industrial Enterprises (ISO 500) Survey Methodology and Definitions

The main objective of "Turkey's Top 500 Industrial Enterprises (ISO 500)" is to determine the largest industrial enterprises in Turkey as well as their sizes to see the development of Turkish industries and to help prepare a road map for the future.

1. METHODOLOGY

"Turkey's Top 500 Industrial Enterprises" is a survey which covers all of Turkey geographically and all companies in the industrial sector economically. The survey unit is a workplace. A workplace is a place where one or more people engage in industrial and commercial activities at one venue, under a single ownership. The survey includes workplaces which are engaged in industrial activities and which have separate accounting records and resources.

As of 2014, the survey data is now collected electronically. The survey asks enterprises to provide information on their net sales, production-based sales, exports (in dollars), pre-tax profit/loss for the period, total assets and liabilities, annual average number of employees, R&D expenditures and factor revenue payments used in calculating gross value-added (such as salaries and wages, interest payments, nonoperating revenues, depreciation and indirect taxes, and provisions allocated from profits). It also includes information on capital distribution and industrial activity codes (NACE Rev 2).

Although the information provided by the enterprises is used in the survey, the enterprises are also asked to upload electronically Corporate Tax Statements (E-statement) submitted to the Ministry of Finance that include their year-end balance sheets and income statements prepared in accordance with the Tax Procedure Law. The information provided in the survey forms are compared with those in the balance sheets and income statements; the companies are contacted in case of discrepancies and asked to correct the discrepancies in writing. The balance sheets and income statements are used as the basis of information in cases where no explanation is provided.

Since the objective of "Turkey's Top 500 Industrial Enterprises" survey is to determine the largest industrial enterprises in Turkey, enterprises which do not want to disclose their information are also included in the

survey; all information relating to them is used in the evaluations but not disclosed to the public.

"Turkey's Top 500 Industrial Enterprises" survey covers the industrial sectors (mining and quarrying, manufacturing, electricity, gas, steam and air conditioning supply) and is based on the criterion of production-based sales (excluding the sales of goods manufactured by the enterprises themselves, sales of commercial goods).

In this study, the enterprises are ranked according to their sales from production, as well as sales revenue, gross value-added, equity capital, total assets, profit before tax, EBITDA, exports and average number of employees.

The main table with information about the enterprises also indicates the ranking of the enterprises in the previous year's ISO 500 list based on their sales volumes. The enterprises, for which a ranking for the previous year has not been indicated, may not have been in the list the previous year, may be an enterprise that has chosen not to disclose its information the previous year or may have moved up from the second 500 to the top 500 list.

2. DEFINITIONS AND COMMENTS

2.1. Sales Revenues (Net)

Net sales consists of the sales of goods manufactured by the company, goods the materials of which are provided by the company and which are manufactured by a third party (subcontracting), goods that are bought and sold without any production processes, as well as revenues from subcontracting where the materials of another party are used to manufacture goods on its behalf. Net sales include domestic and international sales. Net sales should be indicated exclusive of all sales taxes, funds, VAT and Special Consumption Tax. Net sales should be equal to the net sales in the income statement.

2.2. Sales Revenues (Net)

Turkey's Top 500 Industrial Enterprises are ranked based on the criterion of production-based sales (net). Production-based sales include revenues from the sales of goods manufactured by the company, sales

of goods the materials of which are provided by the company and which are manufactured by a third party (subcontracting), and goods where the materials of another party are used to manufacture goods on its behalf. As it is the case with net sales, production-based sales should be indicated as a net figure. In other words, the figure should be exclusive of all sales taxes, funds, VAT and Special Consumption Tax. Goods that are bought and sold as they are without any production processes should not be included in production-based sales.

Sales price: It is the ex-factory price. The sales price is the price after the deduction of all discounts on behalf of the client and all transportation and delivery expenses made on behalf of the client. Should the products be transported with the vehicles of the workplace, then the sales price of such goods is the price at which the products are delivered to the buyer. The sales price does not include all sales taxes, funds, VAT and Special Consumption Tax.

2.3. Gross Value-Added

The survey form includes questions on factor incomes since the Top 500 Industrial Enterprises survey aims at calculating the enterprises' contributions to the country's economy.

The sum of wages and salaries (full compensation) + interest paid + profit as national income gives the net value-added.

Profit as national income = pre-tax profit/loss for period + provisions allocated (free provisions from profit, special funds and similar provisions such as provisions and provisions for severance payments written off as expenses) - other net non-operating revenues.

Net value-added + amortization set aside for the year + indirect taxes - subsidies = gross value-added.

2.4. Equity

The loss for the period and the accumulated loss are deducted from the sum of paid-up capital, capital reserves, profit from previous years and net profit for the year. It should equal the equity in the balance sheet.

2.5. Total Assets

It should equal the total assets (current assets + fixed assets) in the balance sheet.

2.6. Profit/Loss for the Period (Before Tax)

It should equal the pre-tax profit or loss for the period in the income statement.

2.7. Earnings Before Interest, Tax, Depreciation and Amortization

It is the sum of pre-tax profit/loss for the period, amortization set aside for the year, and net financial revenues and expenses.

2.8. Exports

It is the dollar value of a company's exports (Fob). It should not include exports to free trade zones and transit trade. If a company in the survey gets a VAT refund due to exports, the amount of export registered sales should be included in the export amount. Export amounts should not include any financial aid (subsidies) from the state. Exports to the Turkish Republic of Northern Cyprus should be stated in dollars.

2.9. Number of Wage Employees

The average number of salary and wage employees should be indicated. All wage and salary employees fall within the scope of the survey.

2.10. Sectoral Classification

This study, which is a time series, uses the United Nations' International Standard Industrial Classification of All Economic Activities (ISIC Rev. 2) in order not to interrupt the series and to enable comparison with previous years. In parallel with the NACE code survey (TOBB Turkish Union of Chambers and Commodity Exchanges) started in 2012, this study also includes the industrial enterprises' NACE codes as provided by the enterprises or the chambers of which they are members.

The Statistical Classification of Economic Activities in the European Community (NACE Rev2) is used for all sectoral classifications since the 2013 survey.

ACTIVITY CODES-CAPITAL DISTRIBUTION

Economic Activity Codes

The alphabetical list includes the enterprises' capital distribution, their rankings among the Top 500 Industrial Enterprises, and their rankings in the private or public sectors by their field of activity. It also includes the economic activity codes for each enterprise based on the Statistical Classification of Economic Activities in the European Community (NACE Rev.2), as well as the United Nations' International Standard Industrial Classification of All Economic Activities (ISIC Rev. 2). The ISIC Rev.2 economic activity codes of the enterprises are based on the NACE Rev.2 economic activity codes provided either by the enterprises themselves or by the chambers of which they are members.

Statistical Classification of Economic Activities of the European Union (NACE Rev.2, 2016)

Code	Definition
B	MINING AND QUARRYING
05	Coal mining
06	Extraction of crude petroleum and natural gas
07	Mining of metal ores
08	Other mining and quarrying
09	Mining support services and activities
C	MANUFACTURING
10	Manufacture of food products
11	Manufacture of beverages
12	Manufacture of tobacco products
13	Manufacture of textiles
14	Manufacture of wearing apparel
15	Manufacture of leather and related products
16	Manufacture of wood and of products of wood and cork (except furniture)
17	Manufacture of paper and paper products
18	Printing and reproduction of recorded media
19	Manufacture of coke and Refined petroleum products
20	Manufacture of chemicals and chemical products
21	Manufacture of basic pharmaceutical products and pharmaceutical preparations
22	Manufacture of rubber and plastic products
23	Manufacture of other non-metallic mineral products
24	Manufacture of basic metals
25	Manufacture of fabricated metal products (except machinery and equipment)
26	Manufacture of computer, electronic and optical products
27	Manufacture of electrical equipment
28	Manufacture of machinery and equipment n.e.c.
29	Manufacture of motor vehicles, trailers and semi-trailers
30	Manufacture of other transport equipment
31	Manufacture of furniture
32	Other manufacturing
33	Repair and installation of machinery and equipment
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY
35	Electricity, gas, steam and air conditioning supply

United Nations' International Standard Industrial Classification of All Economic Activities (ISIC Rev. 2)

Code	Definition
210	Mining and Quarrying
311	Food Manufacturing
312	Manufacture of Food Products Not Elsewhere Classified
313	Beverage Industries (With and Without Alcohol)
314	Tobacco Manufactures
321	Manufacture of Textiles
322	Manufacture of Wearing Apparel
323	Manufacture of Leather and Fur
324	Manufacture of Footwear
331	Manufacture of Wood and Wood and Cork Products
332	Manufacture of Furniture and Fixtures
341	Manufacture of Paper and Paper Products
342	Printing
351	Manufacture of Industrial Chemicals
352	Manufacture of Other Chemical Products
353	Petroleum Refineries
354	Manufacture of Miscellaneous Products Of Petroleum and Coal
355	Manufacture of Rubber Products
356	Manufacture of Plastic Products Not Elsewhere Classified
361	Manufacture of Pottery, China and Earthenware
362	Manufacture of Glass and Glass Products
369	Manufacture of Other Non-Metallic Mineral Products
371	Iron and Steel Basic Industries
372	Non-Ferrous Metal Basic Industries
381	Manufacture of Fabricated Metal Products, Except Machinery and Equipment
382	Manufacture of Machinery Except Electrical
383	Manufacture of Electrical Machinery Apparatus, Appliances and Supplies
384	Manufacture of Transport Equipment
385	Manufacture of Professional and Scientific, and Measuring and Controlling Equipment
390	Other Manufacturing Industries
400	Electricity Sector

Notes:

- 1. Economic Activity Code:** In 2015, the enterprises' economic codes were indicated according to both the Statistical Classification of Economic Activities (NACE Rev.2, 2016) of the European Union and the United Nations' International Standard Industrial Classification of All Economic Activities (ISIC Rev. 2). The economic activity areas of the enterprises are given in the Economic Activity Codes table.
- 2. Public / private sector rank:** This column indicates the enterprises' rankings in their own groups based on the private sector or public sector ranking.
- 3. Overall ranking:** The general rank of an enterprise in the Top 500 Industrial Enterprises list.
- 4. Capital distribution:** The enterprises' capital distributions are expressed in % based on public, private, domestic or foreign capital.
- 5. Companies which wish to remain anonymous:** In order to maintain the integrity of the survey, an additional table is used to show in an anonymous manner the sectoral distribution of enterprises which are among the Top 500 Industrial Enterprises and which wish to remain anonymous.

ISTANBUL CHAMBER OF INDUSTRY

History

Istanbul, with a history that goes back to 3000 B.C., has been the capital city of the Roman, Byzantine, and Ottoman Empires. Istanbul has served as a religious, cultural, economic, and commercial center throughout history and at the same time, it is here that the foundations of industry were established. Istanbul progressed into large-scale production in the 1830s. In the first years of the Republic, industrialization was a State-executed mission. Immediately after World War II, Istanbul began to host a significant extent of private sector investments in the manufactured goods industry.

From the 1950s onwards, a new generation of labor-intensive, small-scale manufacturing investments emerged, along with some large private investment enterprises. The growth of industry thus started in tiny workshops and despite the lack of resources and materials in that period, these enterprises made significant advances into the future. After 1950, the manufacturing industry in Istanbul went through a remarkably rapid development process with the onset of infrastructural investments that were needed especially in the areas of transportation and energy, and the city started to benefit significantly from loans, incentives, and public sector investments. One of the major actors in the progress during that period was the Istanbul Chamber of Industry, which was founded

in 1952. Established upon the written request of close to 750 industrialists, the Istanbul Chamber of Industry kicked off its operations with its first Assembly meeting on May 30, 1952. Kazım Arın was appointed President for the first Assembly of the Chamber while Sırrı Enver Batur assumed the position of Vice President. The first President of the Board of Directors was Hüsnü Yaman, who served along with Vice Presidents Cahit Evrenos and Hasan Derman. Initially located in the IV. Vakıf Han building, the Istanbul Chamber of Industry accomplished major growth in a short period of time and transferred its headquarters to the second floor of Kılavuz Han in Sirkeci. With the surge in the number of its members, Kılavuz Han also fell short of catering to the scope of business in ISO. Kruger Han, where the Chamber is currently located today, was procured in 1958, and the Chamber moved into its new offices in 1963. By the end of 1963, the Istanbul Chamber of Industry had reached 2,365 members. Today, with a roster of over 18,000 members, the organization is Turkey's largest industrial chamber.

The Place of ISO Within Turkish Economy

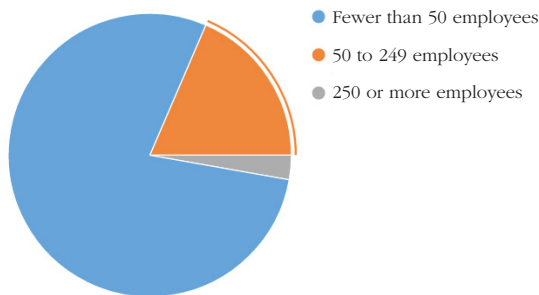

Istanbul Chamber of Industry, whose main pillar of strength is its members' contribution to national economy since its inception, is the largest chamber of industry in

ISTANBUL CHAMBER OF INDUSTRY

Turkey and one of the strongest representatives of the Turkish industry.

- The value added by ISO members corresponds to approximately 36 percent of that of the Turkish industrial sector.
- ISO members also deliver around 34 percent of the Turkish industrial sector's manufacturing.
- ISO member companies continue to employ over 15 percent of the Turkish industrial sector workers (registered and unregistered employment).
- By their employment size, 78.7 percent of ISO members are small-sized (fewer than 50 employees), 18.5 are medium-sized (50 to 249 employees), and 2.8 percent are large (250 or more employees) enterprises

Distribution of ISO Member's Employment Size (%)

- ISO members' operations concentrated on the manufacturing of clothing, leather and leather goods at 22.8 percent, followed by manufacturing of machinery, parts and metal goods at 15.6 percent, manufacturing of chemical, plastic and rubber products at 13 percent, and textile manufacturing at 11 percent.
- As at 2015, Turkey's Top 500 Industrial Enterprises comprise 182 ISO members. There are 177 ISO member enterprises in the Second Top 500 Industrial Enterprises list. Thus, in 2015, the 1000 Top Industrial Enterprises featured 359 ISO members,
- In 2015, total exports of these 359 members accounted for 21.3 percent of Turkey's total exports.

Our Mission

To support sustainable growth of our industry by creating information, policies and systems in collaboration with internal and external stakeholders, and offering innovative services to add value to industrial enterprises; and to steer the industrial environment and establishment by contributing to the development and implementation of a framework and elevating the image of industrialists.

Our Vision

To develop Turkish industry at the global scale by establishing sustainable competitive capacity in and increasing the competencies of our industrial enterprises as we serve as an efficient stakeholder who contributes to the direction of the industrial environment.

Our Values

Istanbul Chamber of Industry is a transparent, inclusive, reliable, determined, realistic and innovative organization that attaches utmost importance to the principles of universal ethics, social responsibility, and environmental awareness.

Our Service Approach

As one of the largest and most well-established representative organizations of Turkish industry, Istanbul Chamber of Industry draws its strength from its members. Accordingly, ISO strives to

- Continuously improve communications with its members,
- Deliver competent, high-quality and efficient services to create value for its members,
- Ensure that Sectoral Committees maintain open communications and cooperation with relevant associations and professional organizations in identifying and solving problems, and communicate such solutions to said organizations by Sectoral Committees within the knowledge of ISO management,
- Utilize the press more efficiently to share the information and ideas created by ISO,
- Enhance cooperation and communication with our umbrella organization TOBB (Turkish Union of Chambers and Commodity Exchanges), universities, research institutions, all relevant organizations and public agencies to deliver fruitful and quantifiable studies,
- Better promote its projects, services and events; enhance communications with members, and utilize Internet and social media more efficiently to communicate ISO's ideas to the public,
- Enhance the brand value of ISO's long-time periodical "Sanayi" to turn it into a reference guide for the industry and a major line of communications with its members and the industry.
